

Amendments to the Abstract

ABSTRACT OF THE DISCLOSURE

Methods and systems are provided by which a flexible, efficient and easy-to-use real-time enterprise management system is provided. The methods and systems **provided** can effectively **manage-monitor and manage the resources and events of each of platforms in a plurality of computers within** a fluidly changing network environment **(e.g. client/server and peer-to-peer networks)**. Also provided are methods and systems which allow an individual **computer** to determine whether or not its current performance characteristics vary from their acceptable parameters without having to contact any other **computer**. Finally provided are methods and systems by which computers can analyze and store data regarding their performance characteristics in real time.
